

541-30

Universal cleaner for plastics

A brand of BASF –
We create chemistry

Application: Solvent borne universal cleaner for plastics, specifically suited to remove the release agents used in manufacturing of plastic parts, especially for preparation of new bumpers before refinishing. 541-30 is recommended for the use of new automotive plastic add-on parts, all common plastic substrates, plastics PU foam and polyamide and GRP / SMC.

Handling

Soak a clean and dry lint-free cloth with PK 541-30. Clean small areas of approx. 0.5 m² of the surface to be painted and wipe these areas immediately afterwards with a dry cloth of the same quality. 541-30 should not dry on the surface being treated. Attention: Individual paint coats may suffer surface etching from the use of 541-30. In this case, ensure a good flashoff of the substrate before going on with the repair so that no solvents will be trapped in the new paint system. In extreme cases, remove the affected paint coats before applying the new paint system.

541-30 is ready for use.

Remark As specified in the Glasurit processes.

Please note: For automotive refinish, repair instructions of vehicle manufacturers, in particular regarding installed sensor technology, must always be observed in addition to the processing instructions given within this document.

Safety advice:

The products are suitable for professional use only.

It cannot be ruled out that this product contains particles < 0.1 µm.
